DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Babcock et al (US 4285728) in view of Okamoto (JP B2 07-37334).
- 4. Babcock et al taught methods of forming lithium-aluminum-silicate glasses into parabolic telescope mirror blanks and heat treating the glass to form beta-eucryptite and beta-spodumene (see figures and examples, especially col. 28, line 28 to col. 29, line 2 and the claims). Babcock et al taught casting of shapes that were ground to the appropriate parabolic curvature. Babcock et al did not teach pressing molten glass with a smooth surfaced ram into a parabolic contour. Okamoto taught pressing of "reflection mirror substrates" from lithium-aluminum-silicate glasses and heat treating the glass to form beta-eucryptite and beta-spodumene such that a

Page 3

smooth surface was produced (see English language translation provided by the applicant, page 3, lines 35-38; page 4, lines 1-25 and pages 5 and 6 in their entirety). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to directly press the parabolic mirror substrates of Babcock et al such as in Okamoto because Okamoto taught that it avoided difficult and costly grinding or polishing steps. Likewise, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to expect the mirror substrates of Okamoto to have a parabolically contoured surface because Babcock et al taught that such shapes were useful in telescope mirrors.

5. With regard to claims 23 and 24, Okamoto specifically states times and temperatures in the examples which fall in the claimed ranges. Furthermore, Babcock et al and Okamoto each provided ample suggestive matter to permit a person of skill in the art to determine heat treatments for the particular proportion of crystalline content desired.

Conclusion

- 6. The prior art made of record and not relied upon is cited to further show the state of the art.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean E. Vincent whose telephone number is (571) 272-1194. The examiner can normally be reached on M F (8:30 6:00).
- 8. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven P. Griffin can be reached on (571) 272-1189. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
- 9. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9/197 (toll-free).
